

**PRODUCT CATALOGUE****Vol. 2**

Onboard wires

Connecting wires and installation cables

Shielding braids

Copper and copper nickel-plated wires with highly heat-resistant enamel insulation based on polyimides

## Dear partners!

JSC “Factory “Chuvashkabel” welcomes you on the pages of our catalogue. The company has been successfully operating since 1961 and is one of the main suppliers of cable and wire products for the Russian aerospace industry. The company is widely known in the market as a manufacturer of high quality products.

The company's quality management system is certified for compliance with the requirements of ISO 9001:2015, AS 9100C.

In order to maintain technological leadership in the manufacture of installation, onboard and other cables and wires, an extensive retrofitting program has been successfully implemented in recent years, which has enabled to move to a qualitatively new level of technical equipment of the enterprise. Our own research and development service in close cooperation with leading industry institutes, allows to develop and launch manufacture of new types of products, including those under import substitution programs. Products are not inferior, and sometimes even surpass the best world analogues, both in terms of the totality of characteristics and in terms of price/quality ratio.

Manufacture of cables and wires according to individual orders of consumers is possible.

The company applies a flexible pricing policy. A safety stock has been created and maintained for the most popular positions.

As a result, more than 1000 leading companies from Russia and the CIS countries are regular customers of JSC “Factory “Chuvashkabel” today.

JSC “Factory “Chuvashkabel” is always glad to cooperate and is open for long-term partnership.

Sincerely,  
the staff of JSC “Factory “Chuvashkabel”

The range of onboard and connecting wires manufactured by the enterprise includes a large number of standard sizes of single-core and multi-core designs. The wires are produced as multi-core and single-core of tinned copper, silver-plated copper, nickel-plated copper and copper wires. Wires can be unshielded and shielded in a protective sheath.

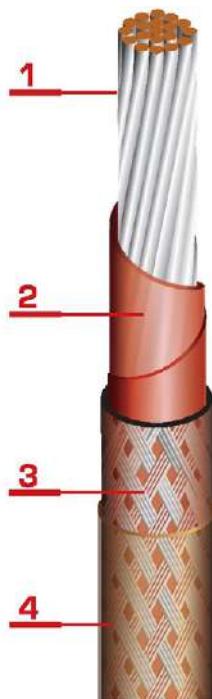

The onboard wires are flexible and easy to install, combined with good abrasion resistance and high mechanical characteristics, including puncturing resistance.

In addition to being used in well-known aircraft such as IL-96-300, TU-334 and space equipment, onboard wires can be used in numerous projects where chemical resistance, small size and weight, fire resistance, resistance to oils, fuels and other aggressive environments, resistance to arc discharge and high humidity are required. Wires of this class are used in the electrical, aviation, aerospace and other sectors of the industrial complex, where their excellent characteristics will ensure reliable operation and fire safety.

Connecting wires are able to work for a long time at temperatures from  $-150^{\circ}\text{C}$  to  $+250^{\circ}\text{C}$ . This enables to choose a product for almost any occasion, including advanced developments in the field of aviation and space technology.

## TABLE OF CONTENT

<b>Onboard wires.....</b>	<b>4</b>

# Onboard wires

БИФ, БИФЭ, БИФЭЗ, БИФ-Н, БИФЭ-Н, БИФЭЗ-Н

**БИФ, БИФЭ, БИФЭЗ**

**БИФ-Н, БИФЭ-Н, БИФЭЗ-Н**

Regulatory documentation	TU 16-505.945-76	
National product classification code	35 8339	35 8332
Application	<ul style="list-style-type: none"> <li>For fixed installation of the onboard electrical network of aviation equipment and operation at voltage up to 250 VAC, frequency up to 6000 Hz (350 VDC) at atmospheric pressure up to 0.67 kPa or 600 VAC, frequency up to 6000 Hz (750 VDC) at atmospheric pressure up to 60 kPa.</li> </ul>	
Advantages	<ul style="list-style-type: none"> <li>The wires are resistant to abrasion and withstand at least 10 000 double strokes of the needle with a pressing force of 5.9 N, as well as vibration, shock and linear loads and acoustic noise.</li> <li>The wires are resistant to high atmospheric pressure up to 295 kPa (<math>3 \text{ kgf/cm}^2</math>), salt fog, atmospheric condensed precipitation (frost, dew), oils and mold fungi.</li> <li>Wires are flame-retardant.</li> </ul>	

## Design

- 1 **Inner conductor** is of silver-plated copper wire (for БИФ, БИФЭ, БИФЭЗ wires); of silver-plated wires of БрХЦрК alloy (for БИФбр, БИФЭбр, БИФЭЗбр wires); of copper nickel-plated wire (for БИФ-Н, БИФЭ-Н, БИФЭЗ-Н wires); of nickel-plated wire of БрХЦрК alloy (for БИФ-Нбр, БИФЭ-Нбр, БИФЭЗ-Нбр wires);
- 2 **Insulation** is of polyimide-fluoroplastic film ПМФ;
- 3 **Shield** is (braid density factor not less than 80%) of silver-plated copper wire (for БИФЭ (бр), БИФЭЗ (бр) wires); of nickel-plated copper wire (for БИФЭ-Н (бр), БИФЭЗ-Н (бр) wires);
- 4 **Protective coating** is of a polyimide-fluoroplastic film ПМФ in the form of a wrapping (for БИФЭЗ (бр) and БИФЭЗ-Н (бр) wires).

## Specifications

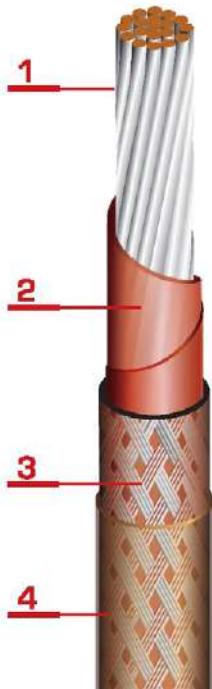

Operating temperature range .....	-60°C to +200°C
Test AC voltage with frequency of 50 Hz, 5 min, kV .....	2200
Operating AC voltage with frequency of 6 kHz at atmospheric pressure up to 0.67 kPa, V .....	250
Operating AC voltage with frequency of 6 kHz at atmospheric pressure up to 60 kPa, V .....	600
Operating DC voltage at atmospheric pressure up to 0.67 kPa, V .....	350
Operating DC voltage at atmospheric pressure up to 60 kPa, V .....	750
Construction length of БИФ-Н, min., m .....	30
Construction length of other grades, min., m .....	20
Electrical resistance of cable insulation, calculated per 1 m, МΩ, min.:	
- under normal climatic conditions .....	$1 \times 10^5$
- at temperature of 200°C .....	$1 \times 10^4$
- at a relative humidity of 98% and temperature of 35°C .....	
- after exposure for 48 hours .....	$1 \times 10^4$
The wires withstand test with AC voltage with frequency of 50 Hz under normal climatic conditions:	
- without mechanical and climatic influences, V .....	2200
- after mechanical and climatic influences, V .....	1500

# Onboard wires with insulation of Modified Radiation Cross-linked ETFE Polymer

**БС(Э)(0) 35-1298, БС(ЭО) 36-1398, БС(ЭО) 36-1498  
(analogues of 55PC02, 55PC12, 55PC32 wires)**

## Design

- 1 **Inner conductor** is of twisted tinned copper wires for БС(ЭО) 35-1298, silver-plated copper wires for БС(ЭО) 36-1398, nickel-plated copper wires for БС(ЭО) 36-1498 (flexibility class 5 for sections 0.20–0.50 mm<sup>2</sup>, flexibility class 4 for sections 0.75–6.0 mm<sup>2</sup> according to GOST 22483);
- 2 **Two-layer insulation** is of Modified Radiation Cross-linked ETFE Polymer;
- 3 **Shield** is in the form of braid of tinned copper wires for БС(ЭО) 35-1298, silver-plated copper wires for БС(ЭО) 36-1398, nickel-plated copper wires for БС(ЭО) 36-1498;
- 4 **Sheath** is of Modified Radiation Cross-linked ETFE Polymer.

## Specifications

Operating temperature range:

- БС(ЭО) 35-1298 .....	-65°C to +155°C
- БС(ЭО) 36-1398, БС(ЭО) 36-1498 .....	-65°C to +200°C

Electrical insulation resistance, calculated for length of 1 m and temperature of 20°C, MΩ, min.: ..... 1x10<sup>6</sup>

Minimum operating time of wires at maximum operating temperature, hour..... 10000

- at a value of elevated ambient temperature, during operation +100°C, hour .....	33000
- at a value of elevated ambient temperature, during operation +85°C, hour .....	100000

Operating AC voltage, V ..... 600

Operating DC voltage, V ..... 850

Wire service life ..... 25 years

# Onboard wire with two-layer polyimide-fluoroplastic insulation

БП-37-1499, БПЭО-37-1499, БП-36-1399 (analogues of wires as per EN 2267, EN 2714)

**БП(ЭО) 37-1499, БП 36-1399**

Regulatory documentation	ПБМи.358300.002ТУ
National product classification code	35 8300
Application	<ul style="list-style-type: none"> <li>The wires are designed for fixed installation of the onboard electrical network of aviation equipment and operation at voltage up to 600 VAC, frequency up to 6000 kHz or at up to 1000 VDC.</li> </ul>

## Specifications

Operating temperature range:

- БП(ЭО)-37-1499 ..... -65°C to +260°C
- БП-36-1399 ..... -65°C to +200°C

Electrical insulation resistance, calculated for length of 1 and temperature of 20°C, MΩ. min.: ..... 1.5x10<sup>6</sup>

Minimum operating time of wires at maximum operating temperature, hour ..... 10000

- at max. value of elevated ambient temperature, during operation +200°C  
for wires БП-37-1499 and БП(ЭО)-37-1499, hour ..... 100000
- at a value of elevated ambient temperature, during operation +125°C for wires  
БП-37-1499, БП-36-1399 and БП(ЭО)-37-1499, hour ..... 130000
- at a value of elevated ambient temperature, during operation +85°C for wires  
БП-37-1499, БП-36-1399 and БП(ЭО)-37-1499, hour ..... 150000

Operating AC voltage, V ..... 600

Operating DC voltage, V ..... 1000

Wire service life ..... 25 years

## Design

- 1 **Inner conductor** is of twisted nickel-plated copper wires for БП(ЭО)-37-1499, silver-plated copper wires for БП-36-1399;
- 2 **Two-layer PTFE polyimide wrapped insulation;**
- 3 **Shield** is of nickel-plated copper wires for БП(ЭО)-37-1499;
- 4 **Sheath** is polyimide-fluoroplastic for БП(ЭО)-37-1499.

# Onboard wires with polyimide-fluoroplastic insulation

БК-37-1499, БКЭО-37-1499

БК-37-1499, БКЭО-37-1499

Regulatory documentation	ПБМИ.358300.002ТУ
National product classification code	35 8300
Description	Onboard wires with polyimide-fluoroplastic insulation БК-37-1499, БКЭО-37-1499
Application	<ul style="list-style-type: none"> <li>Designed for fixed installation of the onboard electrical network of aviation equipment and operation at voltage up to 600 VAC, frequency up to 6000 kHz or at up to 1000 VDC.</li> </ul>
Operating temperature range	Minus 65°C to 260°C

## Specifications

Electrical resistance of cable insulation, calculated per 1 m of length, MΩ, min.: .....	1.5x10 <sup>6</sup>
Electrical resistance of wire insulation at 95°C, calculated per 1 m of length, MΩ, min.....	15x10 <sup>3</sup>
Wire insulation is resistant to abrasion by a needle with a diameter of 0.60 mm with a pressing force of 5.9 N, min.....	3000 double strokes
Wire service life, years .....	25
Gamma-percentile operating time to failure .....	5000 h at 260°C
	7000 h at 200°C
	150000 h at 85°C

## Design

- 1 **Inner conductor** is of nickel-plated copper wires
- 2 **Two-layer insulation** is of polyimide varnish and fluoroplastic film
- 3 **Shield** is of nickel-plated copper wires
- 4 **Sheath** is of polyimide-fluoroplastic film and fluoroplastic film

# Onboard irradiated wire with two-layer insulation

БПДО, БПДОЭ

	БПДО	БПДОЭ
Regulatory documentation		TU 16-505.941-76
National product classification code	35 8311 6200	35 8313 6200
Application	<ul style="list-style-type: none"> <li>The wires are designed for fixed installation of the onboard electrical network of aviation equipment and operation at voltage up to 600 VAC, frequency up to 2000 Hz or 850 VDC.</li> </ul>	
Advantages	<ul style="list-style-type: none"> <li>The wire is resistant to puncturing, bending, abrasion, sinusoidal vibration, mechanical shock, acoustic noise, linear acceleration, low and high pressure, temperature changes, high humidity, static and dynamic dust, salt fog, solar and ultraviolet radiation, condensed precipitation (frost, dew), mold fungi, and also has high chemical resistance to aviation fluids (oil, gasoline, kerosene, hydraulic fluid).</li> </ul>	

## Specifications

Climatic version .....	V
Wire operating temperature .....	-60°C to +105°C
Maximum elevated temperature (single exposure for 5 minutes) .....	+300°C
Operating AC voltage with frequency up to 2000 Hz, V .....	600
Operating DC voltage, V .....	850
Test AC voltage with frequency of 50 Hz, 1 min., V .....	2200
Electrical insulation resistance per 1 m of length, MΩ, min.:	
- upon acceptance and delivery .....	1x10 <sup>4</sup>
- during operation and storage .....	1x10 <sup>3</sup>
Construction length, min., m .....	25
Minimum service life .....	15 years

## Design parameters

6.0	49x0.39	4.9	5.5	64.6	85.0	3.35

## Design

- 1 **Conductor** is of stranded copper tin-plated wires;
- 2 **Insulation** is of radiation grafted polyethylene;
- 3 **Protective layer** is of radiation grafted PTFE 2M;
- 4 **Shield for БПДОЭ** is in the form of a braid of tinned copper wires with a density of at least 80%.

# Connecting thermal resistant wires with PTFE insulation

МГТФ, МГТФу, МГТФЭ

МГТФ, МГТФу, МГТФЭ

Regulatory documentation

TU 16-505.185-71

National product classification code

35 8332

Application

- For intra- and inter-block mounting of various radio-electronic and electrical equipment and operation at a rated voltage of 250 VAC, frequency up to 5 kHz or 350 VDC.

## Specifications

Operating temperature range ..... -60°C to +220°C  
 Test AC voltage with frequency of 50 Hz for 1 minute, V:

- for МГТФу wires .....	750
- for МГТФ wires .....	1500
- for МГТФЭ wires .....	1000

Electrical insulation resistance of 1 m of length, MΩ, min.:

- under normal climatic conditions.....	1x10 <sup>5</sup>
- at temperature of 220°C.....	1x10 <sup>4</sup>
- at a relative humidity of 98% and temperature of 25°C without moisture condensation .....	1x10 <sup>2</sup>

\*Note: Wires МГТФ, МГТФЭ, МГТФу not specified in the specifications are manufactured according to the technical requirements of ToR of the customer.

## Design

- Conductor** is of twisted copper wires;
- Insulation** is wrapping with PTFE-4 film;
- Shield** is performed as braid of tinned copper wires.

# Connecting thermal resistant wires with PTFE insulation

**MK 26-13 and МКЭ 26-13**

	МК 26-13	МКЭ 26-13
Regulatory documentation		ПБМи.358200.004ТУ
National product classification code		35 8214
Application	For intra- and inter-block mounting of various radio-electronic and electrical equipment and operation at a rated voltage of 250 VAC, frequency up to 5 kHz or 350 VDC.	
Advantage	<ul style="list-style-type: none"> <li>MK 26-13 and MKЭ 26-13 wire with an outer insulation layer of sintered fluoroplastic film have increased moisture resistance, mechanical strength of insulation and improved electrical characteristics compared to wires МГТФ, МГТФЭ.</li> <li>Unlike traditional МГТФ, МГТФЭ, MK 26-13, MKЭ 26-13 wires can be produced in various colors.</li> </ul>	

## Specifications:

Operating temperature range:

- MK 26-13 ..... -60°C to +200°C
- MKЭ 26-13 ..... -60°C to +200°C

Electrical insulation resistance per 1 m, MΩ, min.:

- under normal climatic conditions .....  $1 \times 10^6$
- at temperature of 200°C .....  $1 \times 10^5$
- at a relative humidity of 98% and temperature of 35°C without moisture condensation .....  $1 \times 10^4$

Test voltage with frequency of 50 Hz for 1 minute, V ..... 2000

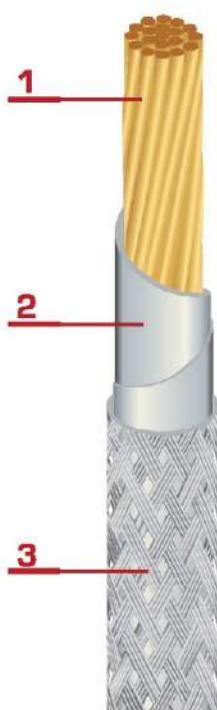

## Design

- Conductor** is of twisted copper wires
- Insulation** is wrapping with PTFE-4 and PTFE-4D film; insulation color is agreed with the consumer and can be: white or natural, yellow, orange, red, blue, brown, black
- Shield** is performed as braid of tinned copper wires

Conductor cross section, mm <sup>2</sup>	Electrical resistance of the cores to the conductor per 1 km of length, Ω, min.	
	single-core	multi-core
0.05	398.7	417.8

## Design

- Conductor** is of twisted copper wires;
- Insulation** is wrapping with PTFE-4 film;
- Sheath** is performed in the form of a braid of polyester thread and coated with silicone varnish;
- Shield** is performed as braid of tinned copper wires.

Minimum service life .....	.....	20 years

## Design

- 1 **Conductor** —
  - a) normal strength — of silver-plated copper wires McP or bimetallic wires BMC (for wires MC 16-13, MCЭ 16-13, MCЭO 16-13, MC 26-13, MCЭO 26-13);
  - b) normal strength — of copper wires (for wires MCЭO 16-13M);
  - c) high-strength conductor — of silver-plated wires of the БрХЦрК alloy (for wires MC 16-33, MCЭ 16-33, MCЭO 16-33, MC 26-33, MCЭ 26-33, MCЭO 26-33);
- 2 **Insulation** is of a PTFE 4D film in the form of a wrapping; the color of the insulation is agreed with the consumer and can be of seven colors: white (natural), yellow, orange, red, blue, green, black;
- 3 **Insulated conductors** — stranded wires are twisted;
- 4 **Shield** is in the form of braids of silver-plated copper wires (made of tinned copper wires for wires MCЭO 16-13M);
- 5 **Sheath** is in the form of wrapping with PTFE-4D films.

## Design

### 1 Conductor —

- normal strength of silver-plated copper wires (MC 16-14);
- high-strength conductor — of silver-plated wires of the БпХЛпК alloy (MC 16-34);

- Insulation is solid of PTFE-4MB; the color of the insulation is agreed with the consumer and can be of eight colors: natural, yellow, orange, red or pink, blue or light blue, green, brown, black. Insulated conductors are twisted in pairs.

# Connecting thermal resistant wires with insulation of radiation grafted polyethylene

## МПО, МПОЭ

### Design

- 1 **Conductor** — of twisted tinned copper wires;
- 2 **Insulation** is of radiation grafted polyethylene.  
Insulation colors: red, blue, black, brown, yellow, green, white (natural);
- 3 **Shield for МПОЭ** is performed in the form of a braid of copper tinned wires with a density of at least 70%, **overlapped** with one, two or three twisted insulated conductors.

	МПО	МПОЭ
Regulatory documentation	TU 16-505.339-79	
National product classification code	35 8325 6500	35 8328 6200
Application	The wires are designed for fixed intra- and inter-device installation of electrical devices at rated voltage up to 380 VAC, frequency up to 2 kHz and up to 160 V, frequency up to 4 kHz or 550 VDC.	
Advantages	The wire is resistant to impact and vibration loads, linear acceleration, acoustic noise, low atmospheric pressure, high relative humidity, mold fungi, static and dynamic dust.	

### Specifications

Climatic version .....	V
Operating temperature range: .....	-60°C to +100°C
Maximum elevated temperature for 5 minutes (the total duration is not more than 30 minutes for the entire service life) .....	+200°C
Operating AC voltage with frequency up to 2 MHz, V .....	380
Operating AC voltage with frequency up to 4 MHz, V .....	160
Operating DC voltage, V .....	550
AC test voltage for with frequency of 50 Hz, V:.....	1000
Electrical insulation resistance per 1 m of length, MΩ, min.: - upon acceptance and delivery .....	1x10 <sup>5</sup>
- during operation and storage .....	5x10 <sup>2</sup>
Construction length, min., m .....	50
Minimum service life .....	15 years

# Connecting thermal resistant wires with PTFE insulation

**МГЛФ**

МГЛФ	
Regulatory documentation	TU 16.K05-025-2003
National product classification code	35 8332
Application	<ul style="list-style-type: none"> <li>Used for intra-block and inter-block connections of electrical devices and equipment for operation at rated AC voltage up to 600 V, frequency up to 1 kHz or DC voltage up to 840 V.</li> </ul>

## Specifications

Operating temperature range: ..... -60°C to +155°C  
 Test AC voltage with frequency of 50 Hz for 1 min., V:

- upon acceptance without the influence of external factors ..... 2200
- upon acceptance after the influence of external factors ..... 1800
- during operation (storage) at the consumer ..... 1200

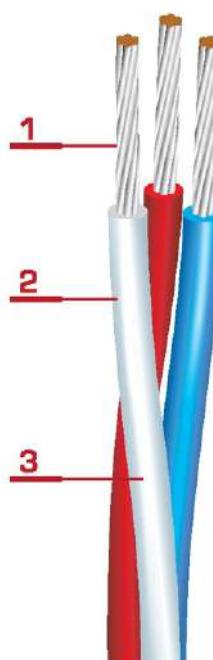

Electrical insulation resistance of 1 m of length, MΩ, min.:

- under normal climatic conditions ..... 1x10<sup>8</sup>
- at temperature of 155°C ..... 1x10<sup>4</sup>
- at relative humidity of 98% (without moisture condensation) and temperature of 35°C ..... 1x10<sup>4</sup>

## Design parameters

Nominal cross section of conductor, mm <sup>2</sup>	Direct current electrical resistance of 1 km of conductor, Ω, max.

## Design

- 1 **Conductor** — multi-wire of copper or tinned copper wires of class 4;
- 2 **Insulation** is of PVC plastic compound, the color of the insulation is agreed with the consumer and can be: white, natural, yellow, orange, red, pink, blue, light blue, green, brown, black, purple;
- 3 **Insulated conductor twisting** — in groups (pair, etc.);
- 4 **Shield** is braid of tinned copper wires;
- 5 **Sheath** is of PVC plastic compound.

# Multi-core installation cable with plastic insulation

**МК(Э)Ш**

	<b>МКШ</b>	<b>МКЭШ</b>
Regulatory documentation		GOST 10348-80
National product classification code	35 4833 0100	35 4833 0200
Application	• Cables are designed for fixed inter-device installation of electrical devices operating at voltage up to 500 VAC, frequency up to 400 Hz or up to 750 VDC	

## Specifications

Operating temperature range:	-50°C to +70°C
Test AC voltage with frequency of 50 Hz for 5 minutes, V:	
- under normal climatic conditions	2000
Electrical insulation resistance of 1 m of length, MΩ, min.:	
- under normal climatic conditions	1x10 <sup>4</sup>
- at temperature of 70°C	1x10 <sup>2</sup>
- at relative humidity of 98% (without moisture condensation) and temperature of 35°C	1x10 <sup>3</sup>

## Design

- 1 Conductor** — of twisted tinned copper wires;
- 2 Insulation** is of PVC plastic compound; the color of the insulation is agreed with the consumer and can be of 7 colors: white or natural, yellow or orange, red or pink, blue or light blue, green, brown, black or purple;
- 3 Over the insulated twisted cores** — polyethylene terephthalate film;
- 4 Shield** is in the form of braid of tinned copper wires (for МКЭШ cables);
- 5 Sheath** — of PVC plastic compound.

# Connecting wires with polyimide insulation resistant to pyrolysis

MK 26-14, МКЭ 26-14, МКЭО 26-16

**MK 26-14, МКЭ 26-14, МКЭО 26-16**

Regulatory documentation	TU 16.K76-210-2006
National product classification code	35 8200
Ap- plication	<ul style="list-style-type: none"> <li>The wires are intended for internal installation of electrical devices and radio-electronic equipment and operation at a voltage of 250 VAC, frequency up to 10 kHz or 350 VDC</li> </ul>
Advantages	<ul style="list-style-type: none"> <li>resistance to propagation of an electric arc at linear voltage of 200 V of a 3-phase power supply, with a frequency of 400 Hz;</li> <li>high processability of insulation removal;</li> <li>replacement of the fluoroplastic suspension with a fluoroplastic film wrapping eliminates the presence of fluoroplastic residues on the conductor, which improves the quality of wire soldering and reduces the time spent on this operation;</li> <li>the presence of colored wires in multi-core wires.</li> </ul>

**Specifications**

Wire operating temperature:	-150°C to +200°C
Test DC voltage, V:	
- without external influencing factors	2000
- after external influencing factors	1500
Electrical resistance of cable insulation, calculated per 1 m of length, MΩ	1x10 <sup>4</sup>
Atmospheric reduced operating pressure up to, Pa	1.33x10 <sup>-4</sup>
Atmospheric increased operating pressure up to, Pa	2.92x10 <sup>5</sup>

**Design**

- 1 Conductor — of twisted silver-plated copper wire БМС or МСр;
- 2 Insulation:
  - inner layer of СКЛФ-4Д fluoroplastic tape;
  - outer layer of polyimide varnish АД-9103;
- 3 Shield – of tinned copper wires (for МКЭ 26-14) and silver-plated copper wires (for МКЭО 26-16);
- 4 Sheath is in the form of a wrapping with polyimide-fluoroplastic film ГМФ-С-351ТП.

# Connecting two-core wires with thinned insulation

MCy

MCy	
Regulatory documentation	TU 16.K05-044-2011
National product classification code	35 8200
Application	• Wires are intended for internal installation of electrical devices and radio-electronic equipment at voltage up to 30 V, frequency up to 2000 Hz

## Specifications:

Wire operating temperature:	.....	-60°C to +200°C
Electrical resistance of cable insulation, calculated per 1 m of length, MΩ, min.:		
- under normal climatic conditions.....		1x10 <sup>5</sup>
- at temperature of 200°C.....		1x10 <sup>4</sup>
- at a relative humidity of 98% and temperature up to 35°C without moisture condensation.....		1x10 <sup>4</sup>
Test AC voltage with frequency of 50 Hz for 1 min. in water, V:	.....	1000

## Design parameters

Number of conductors	Nominal cross section of conductor, mm <sup>2</sup>	Conductor design		Maximum diameter of the insulated core, mm	Wire maximum diameter, mm	Direct current electrical resistance of conductors, Ω, max., in terms of 1 km
		Number of wires	Wire nominal diameter, mm			
1	0.03	7	0.08	0.45	0.45	560
2	0.03	7	0.08	0.45	0.90	560

## Design

- 1 **Conductor** — of silver-plated copper wire;  
2 **Insulation** is of a film of fluoroplastic grade 4D.

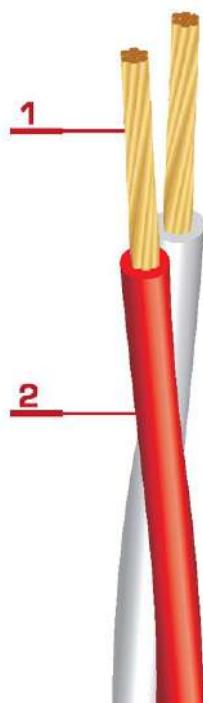

Two insulated conductors are twisted and have different colors.

Insulation color:  
white or natural (W),  
yellow (Y),  
orange (O),  
red (R),  
blue (B),  
black (Bl) colors.

The color of the insulation is agreed upon when ordering.

\* — for wires MC 16-15

\*\* — for wires MC 16-15, МСЭ 16-15

## Design

### 1 Conductor —

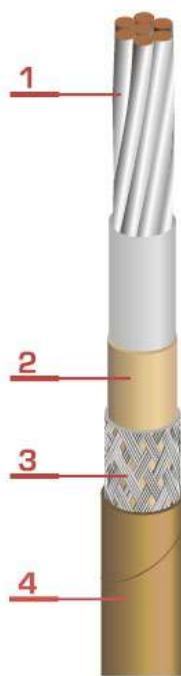

- a) normal strength — of silver-plated copper wire BMC or MCp (MC 16-15, МСЭ 16-15);
- b) high-strength conductor — of silver-plated wires of the БрХЦрК alloy (MC 16-35, МСЭ 16-35)

2 Insulation is of electrical insulating polyimide varnish АД-9103; under the insulation - an anti-adhesive layer of suspension of PTFE-4D;

3 Shield is in the form of braid of tinned copper wires with diameter of 0.08.

# Connecting wires with polyimide insulation

# Connecting wires with plastic insulation

**HB(Э), HBM(Э)**

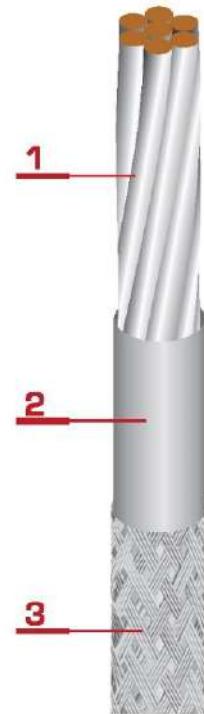

<b>HB(Э), HBM(Э)</b>	
Regulatory documentation	GOST 17515-72
National product classification code	35 8200
Application	<ul style="list-style-type: none"> <li>For operation at rated voltage 600 and 1000 V, frequency up to 10 kHz and DC voltage up to 840 and 1400 V, respectively, in circuits of electrical devices for industrial use.</li> </ul>

## Specifications

Operating temperature range:	-50°C to +105°C
Test voltage with frequency of 50 Hz, V:	
- for 600 V wires	2000
- for 1000 V wires	3000
Electrical resistance of wire insulation, calculated per 1 m of length, MΩ, min.:	1x10 <sup>4</sup>

## Design parameters

Wire grade	Number and design cross section of conductor, mm <sup>2</sup>	Nominal insulation thickness, mm	Max. wire outer diameter, mm	Estimated weight, kg/km	Direct current electrical resistance of wire conductors per 1 km of length, Ω

## Design

- 1 **Conductor** — of tinned copper wires — HB, HBЭ; of copper wires — HBM, HBMЭ;
- 2 **Insulation** is of PVC plastic compound;
- 3 **Shield** is copper wire braid (HBMЭ); of tinned copper wires (HBЭ).

# Thermal resistant cable based on twisted pair for data transmission

КИФЭФ

КИФЭФ

Regulatory documentation	TU 16.K05-041-2011
National product classification code	35 7400
Application	<ul style="list-style-type: none"> <li>The cables are designed for data transmission onboard of vehicles, including for use in internal installations, and operation at voltages up to 100 V, frequencies up to 10 MHz.</li> </ul>
Advantages	<ul style="list-style-type: none"> <li>The cables are resistant to atmospheric precipitation, dust, salt fog, solar radiation, etc.</li> <li>The film shield protects the cable well against high-frequency interference, and the braided shield protects against low-frequency interference, that is, the two-layer shield provides reliable shielding of the cable core over the entire operating frequency range.</li> <li>To ensure the electrical continuity of the shield in case of accidental film breaks during laying and operation, a drain conductor was introduced into the structure of the shield.</li> </ul>

## Specifications

Operating temperature range:	-60°C to +150°C
Minimum operating time of cables 50 000 hours of which: at elevated cable temperature of 155°C	10 000 h
Cables service life	20 years

## Design parameters

### Design

- 1 Conductor —  
of twisted tinned copper wires;  
2 Insulation is of PTFE;  
3 Shield is of copper tinned wires;  
4 Insulation is of PTFE.

	КИФЭФ-120 1x2x0.20	КИФЭФ-120 1x2x0.35	КИФЭФ-100 1x2x0.35
Cross section, mm <sup>2</sup>	0.20	0.35	0.35
Self-surge impedance, Ω	120±10	120±10	100±20
Rated direct current electrical resistance of conductors, Ω/km, max.	81.3	48.1	48.1
Attenuation coefficient at sinusoidal current:			
- with frequency of 1 MHz, dB/m, max.	0.05	0.05	0.05
- with frequency of 3 MHz, dB/m, max.	0.06	0.06	0.06
Maximum cable diameter, mm	6.0	7.2	6.7
Cable weight, kg/m	56.3	76.9	59.2
Recommended data transmission standards	Standard TIA/EIA-485-A, CAN-protocol	LonWorks networks	

# Connecting thermal and radiation resistant wires

**МЛП, МЛПЭ, МЛТП, МЛТПЭ, МСТП, МСТПЭ**

	МЛП	МЛПЭ	МЛТП	МЛТПЭ	МСТП	МСТПЭ	
Regulatory documentation	TU 16-505.554-81						
National product classification code	35 8325 8000	35 8211 8200	35 8325 7700	35 8211 7900	35 8325 7300	35 8211 7600	
Description	Connecting wire with lavan and radiation grafted stabilized polyethylene insulation.	Same as МЛП, but shielded.	Connecting radiation and thermal resistant wire with lavan and radiation grafted stabilized polyethylene insulation.	Same as МЛТП, but shielded.	Connecting radiation and thermal resistant wire with fiberglass and radiation grafted stabilized polyethylene insulation.	Same as МСТП, but shielded.	
Application	<ul style="list-style-type: none"> <li>The wires are designed for mobile and fixed intra- and inter-device installation of electrical devices and output ends of electrical equipment at voltages up to 500 VAC, frequency up to 1000 Hz or 750 VDC.</li> <li>The wires can be used in equipment intended for operation in tropical conditions, provided that the wires are protected against direct exposure to sunlight.</li> </ul>						
Operating temperature range	-60°C to +100°C		-60°C to +150°C				

## Specifications

Test voltage without external influencing factors, V

- for wire cross-sections from 0.08 to 0.12 mm<sup>2</sup>..... 1500
- for other cross sections ..... 2000

Test voltage after external influencing factors, V

- for wire cross-sections from 0.08 to 0.12 mm<sup>2</sup>..... 750
- for other cross sections ..... 1000

Electrical insulation resistance of 1 m of length, MΩ, min.:

- under normal climatic conditions ..... 1x10<sup>5</sup>
- at temperature of 35°C and relative humidity of 98% ..... 1x10<sup>4</sup>

Pulse voltage, V

- for wire cross-sections from 0.08 to 0.12 mm<sup>2</sup>..... 350
- for other cross sections ..... 750

Operating AC voltage with frequency of 1000 Hz, V..... up to 500

Operating DC voltage, V ..... up to 750

Construction length, min., m..... 50

## Design

- Conductor** is of twisted tinned copper wires
- Insulation** is combined of:
  - one layer of lavan and radiation grafted stabilized polyethylene (for МЛП);
  - double layer of lavan and radiation grafted thermally-stabilized polyethylene (for МЛТП);
  - double layer of fiberglass or one layer of fiberglass and the second layer of lavan and radiation grafted thermally-stabilized polyethylene (for МСТП).
- Shield (for МЛПЭ, МЛТПЭ, МСТПЭ)** is a braid of copper round tinned wires with a density of at least 70%.

# Shielding metal braids

ПМО-С, ПМО-Н, ПМО-Л

## ПМО-С, ПМО-Н, ПМО-Л

Regulatory documentation

TU 16.K05-045-2011

National product classification code

48 3387

Application

- Braids are designed for protection against electromagnetic fields and technical protection of both individual wires and cables, and bundles (Harnesses) of wires and cables.

Features

- ПМО braids are almost identical in their characteristics to traditional ПМЛ braids TU 4833-002-08558606-95, incl. in terms of shielding efficiency, while their mass is less by 45–70%.

## Specifications

Operating temperature range:

- ПМО-С .....	-196 to +200°C
- ПМО-Н .....	-150 to +250°C
- ПМО-Л .....	-150 to +155°C

Minimum service life.....25 years

## Design

ПМО-С is shielding metal braid of silver-plated copper wire;

ПМО-Н is shielding metal braid of nickel-plated copper wire;

ПМО-Л is shielding metal braid of tinned copper wire.

## Design parameters

# Copper and copper nickel-plated wires with highly heat-resistant enamel insulation based on polyimides

ПЭТ-имид and ПНЭТ-имид

	ПЭТ-имид	ПЭТ-имид 1st grade	ПНЭТ-имид	ПНЭТ-имид 1st grade
Regulatory documentation	TU 16-505.489-78			
National product classification code	35 9118 0100	35 9118 0900	35 9118 0200	35 9118 1000
Description	• Copper wire, highly heat-resistant, coated with enamel polyimide insulation	• Copper wire, nickel-plated, highly heat-resistant, coated with enamel polyimide insulation		
Application	• The wires are intended for use in electrical machines, apparatus and devices.			
Operating temperature range	• The minimum ambient temperature allowed during the operation of the wires is minus 60°C			

## Specifications

Temperature index.....220°C
