

PRODUCT CATALOGUE

Vol. 3

Radio-frequency coaxial cables

Radio-frequency bicoaxial cables for NPPs

Fire alarm cables

Burglar alarm and video surveillance system cables

Automotive wires

Copper wire

The history of the Cheboksary Plant of Cable Products "Chuvashkabel" begins on December 12, 1961, when the first product was produced — a coil of enameled wire ПЭВ-2. The company is known in the cable and wire products market as a manufacturer of high quality products. The enterprise specializes in the manufacture of products for the needs of the industrial complex, is one of the main suppliers of cable and wire products (in terms of miniature and subminiature cables and wires) for the Russian aerospace industry.

Today, JSC "Factory "Chuvashkabel" is a dynamically developing enterprise of the Russian Federation. Flexible pricing policy open to consumers, the desire to satisfy each client, continuous range expansion based on the demands and needs of the market, improvement of processes and quality of cable production are the principles of the enterprise, which steadily ensure an increase in production and expansion of the sales geography throughout the Russian Federation the CIS countries. As a result, more than 1000 companies from Russia and the CIS countries are regular customers of JSC "Factory "Chuvashkabel" today.

At present, JSC "Factory "Chuvashkabel" manufactures and sells cable and wire products in the following stock item groups:

- Onboard wires and cables (including those with insulation of radiation grafted (irradiated) polyethylene and fluoropolymers).
- Heating cables and wires.
- Installation wires and cables (including those with insulation of radiation grafted (irradiated) fluoropolymers).
- Signal-blocking cables (including for fire alarms).
- Radio-frequency (coaxial) cables.
- Wires for electric machines' winding terminals.
- Automotive wires (including for ABS systems).
- Uninsulated flexible wires.
- Power cables for fixed laying for voltage up to 1 kV incl. (including those with XLPE insulation).
- Control cables.
- High-frequency winding wires with enamel insulation.
- Ship cables.
- Self-supporting insulated wires (SSIWs) for overhead power lines.
- Uninsulated wires for overhead power lines.
- Lighting wires and cords.
- Wires with PVC insulation for washing machines.
- Power wires for electrical installations.
- Other cable products (including cables for security systems and video surveillance systems, lightweight metal braids, nickel-plated wire).

The company's products are used in energy, automotive, rocket and space, construction, electrical engineering and other industries.

JSC "Factory "Chuvashkabel" independently, as well as in close cooperation with the industry institute Russian Scientific and Research Institute of the Cable Industry (VNIIKP), is developing and putting into production new types of products. Thanks to this interaction, the company develops taking into account the advanced trends of the cable industry, aimed at better satisfying the needs of consumers. The plans of JSC "Factory "Chuvashkabel" is to continue work on the development and assimilation of new products that meet modern safety requirements and consumer needs.

When developing new products, the requirements of national and international standards are taken into account and used to the maximum. The enterprise has licenses for the development and manufacture of cable products for rocket and space equipment and special equipment (weapons and missiles), for the manufacture of cable products for nuclear power plants.

A perfect base, experienced personnel, certified for compliance with the requirements of ISO 9001:2015 in relation to the design, manufacture, supply of cable products, the quality management system enable to manage the quality process at the stages of manufacturing development, before shipping products to consumers and satisfy the needs of the most demanding customers.

The high quality of the products of JSC "Factory "Chuvashkabel" is confirmed, among other things, by the following:

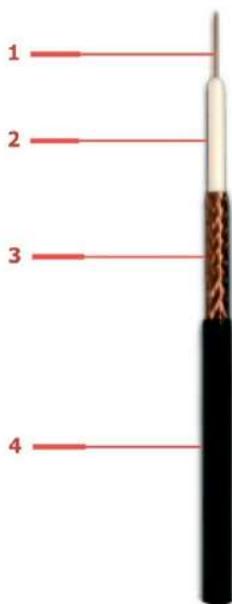

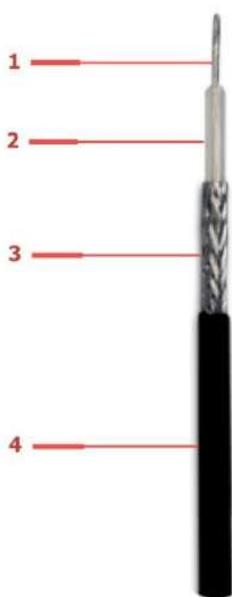

- JSC "Factory "Chuvashkabel" has certificates of type approval of products from the Russian Maritime Register of Shipping, a license for the manufacture of equipment for a nuclear installation (NPP).

The enterprise is equipped with testing equipment that allows for testing and control of all manufactured products, including directly during the manufacture cycle.

The equipment of the enterprise is continuously updated. In recent years, new process and testing equipment from leading manufacturers such as Niehoff, Dunst, Wardewell, OTOMEC, WTM, Maileffer, etc. has been put into operation at many manufacturing sites and workshops.

Partners of JSC "Factory "Chuvashkabel" can always count on constant information support, fast and accurate order fulfillment, prompt processing of documents for the supply of products. Employees of JSC "Factory "Chuvashkabel" do their best to ensure that consumers are satisfied with the cooperation with the enterprise.

RADIO FREQUENCY CABLES OF STANDARD HEAT RESISTANCE 50 Ω

PK 50-2-11 / PK 50-2-13

PK 50-2-16
DESIGN:

- 1** Inner conductor
- 2** Insulation
- 3** Outer conductor
- 4** Sheath

OPERATION GUIDELINES:

Minimum bending radius

- during transportation and storage — 40 mm;
- when installing at t=5°C and above — 20 mm;
- when installing at t<5°C — 40 mm.

Cable service life:

- PK 50-2-13 — 8 years
- PK 50-2-11, PK 50-2-16 — 15 years.

	PK 50-2-11	PK 50-2-13	PK 50-2-16
Regulatory documentation	GOST 11326.1-79	GOST 11326.15-79	GOST 11326.65-79
National product classification code	35 8811	35 8812	35 8811 2204
Application	The cable is designed to transmit low-frequency signals in vibrometry and vibration testing systems. It is applied with the connectors of types 3.5/1.52 "grad" and SMA developed for this cable.	Cables are designed for mounting devices, bushings, connecting antenna systems of television equipment.	
Cable operating temperature, °C	-60 to +85	-40 to +85	-60 to +85

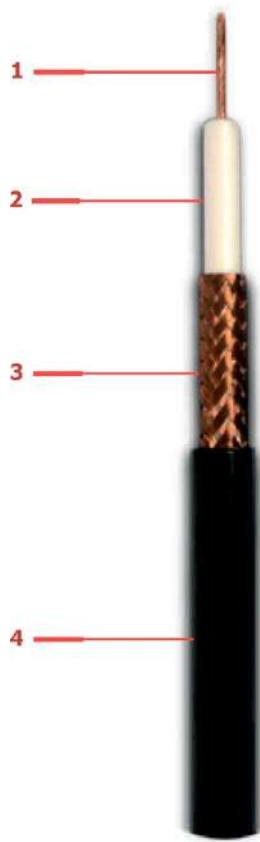

DESIGN PARAMETERS:

	PK 50-2-11	PK 50-2-13	PK 50-2-16
1 Inner conductor	Copper wire, nominal diameter 0.67 mm	Copper wire, nominal diameter 0.67 mm	Seven tinned copper wires with nominal diameter of 0.24 mm, conductor nominal diameter 0.72 mm
2 Insulation	Solid insulation, low density polyethylene, insulated diameter 2.20±0.10 mm		
3 Outer conductor	Braid of copper wires with a nominal diameter of 0.1 mm; braid density 88–92%		Braid of tinned copper wires with nom. diam. of 0.10 mm, braid density 85÷92%, braid angle 50÷60°
4 Sheath	Light stabilized low density polyethylene; cable outer diameter 3.7±0.20 mm	PVC plastic compound; cable outer diameter 3.7±0.20 mm	Light stabilized low density polyethylene, cable outer diameter 3.2 ^{+0.20} _{-0.10} mm
Estimated cable weight, kg/km	19.1	21.4	16.5

ELECTRICAL PARAMETERS:

	PK 50-2-11	PK 50-2-13	PK 50-2-16
Self-surge impedance, Ω	50±2.0		
Attenuation coefficient at a frequency of max. 200 MHz, dB/m	0.3	0.4	
Attenuation coefficient at a frequency of max. 3000 MHz, dB/m	1.60	2.0	
Coupling resistance, MΩ/m, max. at relative air humidity up to 98%	320		
Electric capacity, pF/m	100		
Wavelength shorting coefficient	1.52		

RADIO FREQUENCY CABLES OF STANDARD HEAT RESISTANCE 50 Ω

	PK 50-3-151 (RG 58A/U, RG 58U)	PK 50-3-152 (RG 58A/U, RG 58U)
Regulatory documentation		TU 16.K05-024-2004
National product classification code	35 8800	
Application	The cable is intended for transmission of television signals during community reception of television broadcast, for cable and satellite television systems. The design is similar to cables of the RG-58 type. The cable can be used with BNC, TNC, N, FME, SMA, SMB and UHF connector types.	
Cable operating temperature, °C	-40 to +70	-60 to +85

DESIGN PARAMETERS:

	PK 50-3-151 (RG 58A/U, RG 58U)	PK 50-3-152 (RG 58A/U, RG 58U)
1 Inner conductor	Nineteen copper wires, nominal diameter 0.18 mm	
2 Insulation	Solid insulation, low density polyethylene, insulated diameter 2.95+0.10 mm	
3 Outer conductor	Braid of copper wires with a nominal diameter of 0.10 mm; braid density min. 85%	
4 Sheath	Solid, PVC plastic compound, cable outer diameter 4.95±0.15 mm	Solid, light stabilized low density polyethylene, cable outer diameter 4.95±0.15 mm
Estimated cable weight, kg/km	34.4	29.2

DESIGN:

- 1 Inner conductor
- 2 Insulation
- 3 Outer conductor
- 4 Sheath

ELECTRICAL PARAMETERS:

Self-surge impedance, Ω	50±2.5
Electric capacity, pF/m	100
Maximum power at a frequency of 1 GHz, W	200
Wavelength shorting coefficient	1.51
Insulation resistance, min., MΩ × km	5000
Direct current resistance of inner/outer conductors, max., MΩ/km	33/18
Coupling resistance, max., MΩ/m	320
Test insulation voltage with a frequency of 50 Hz, kV	2.5
Attenuation coefficient at frequency of max., dB/m	100 MHz 0.11 200 MHz 0.16 500 MHz 0.27 800 MHz 0.35 1000 MHz 0.42

Cable service life:

PK 50-3-351 — 8 years
PK 50-3-352 — 15 years.

RADIO FREQUENCY CABLES OF STANDARD HEAT RESISTANCE 50 Ω

	PK 50-3,7-351 (RG 8X, H-155)	PK 50-3,7-352 (RG 8X, H-155)
Regulatory documentation		TU 16.K05-024-2004
National product classification code		35 8800
Application	The cable is designed to transmit signals in the antenna paths of radio communication systems	
Cable operating temperature, °C	-40 to +70	-60 to +85

DESIGN PARAMETERS:

	PK 50-3,7-351 (RG 8X, H-155)	PK 50-3,7-352 (RG 8X, H-155)
1 Inner conductor	Copper wire, nominal diameter 1.37 mm	
2 Insulation	Porous (S-F-S), low density polyethylene, insulated diameter 3.7 ± 0.12 mm	
3 Outer conductor	Foiled shield + braid of tinned copper wires with a nominal diameter of 0.10 mm; braid density min. 38%	
4 Sheath	PVC plastic compound, cable outer diameter 6.10 ± 0.15 mm	Light stabilized low density polyethylene, cable outer diameter 6.10 ± 0.15 mm
Estimated cable weight, kg/km	44	36

ELECTRICAL PARAMETERS:

- DESIGN:**
- 1 Inner conductor
 - 2 Insulation
 - 3 Outer conductor
 - 4 Sheath

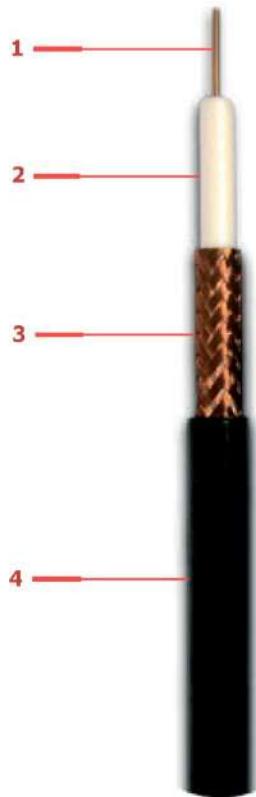

Self-surge impedance, Ω	50 \pm 2.5
	100 MHz
	0.09
Attenuation coefficient at frequency of max., dB/m	200 MHz
	0.13
	500 MHz
	0.20
	800 MHz
	0.26
	1000 MHz
	0.31
Design electric capacity, pF/m	179.5

OPERATION GUIDELINES:

The minimum bending radius during installation is min. 30 mm.
Laying and installation of the cable must be carried out at t of min. 0°C.

Cable service life:
PK 50-3,7-351 — 15 years
PK 50-3,7-352 — 8 years.

RADIO FREQUENCY CABLES OF STANDARD HEAT RESISTANCE 50 Ω

	PK 50-4-11	PK 50-4-11K
Regulatory documentation	GOST 11326.3-79	TU 5.502.037-97
National product classification code	36 8811	38 8811
Application	The cables are designed to transmit signals in the antenna paths of radio communication systems	
Cable operating temperature, °C	-60 to +85	-60 to +85

DESIGN PARAMETERS:

	PK 50-4-11	PK 50-4-11K
1 Inner conductor	Copper wire, nominal diameter 1.37 mm	
2 Insulation	Solid insulation, low density polyethylene, insulated diameter 4.6±0.12 mm	
3 Outer conductor	Two braids of copper wires, nominal diam. 0.15 mm; density of each braid 88–92%	Braid of copper wires with a nominal diam. 0.15 mm; density of braid 88–92%
4 Sheath	Light stabilized low density polyethylene, cable outer diameter 7.80±0.25 mm	Light stabilized low density polyethylene, cable outer diameter 7.0±0.25 mm
Estimated cable weight, kg/km	97.3	66.2

ELECTRICAL PARAMETERS:

DESIGN:

- 1 Inner conductor
- 2 Insulation
- 3 Outer conductor
- 4 Sheath

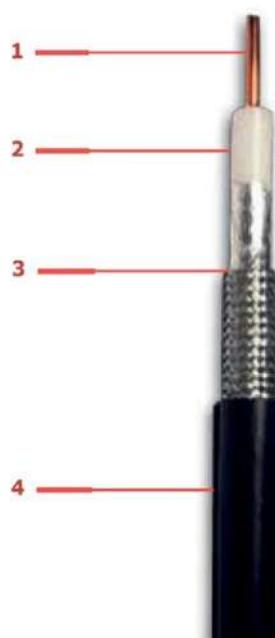

Self-surge impedance for PK 50-4-11, Ω	50±2
Self-surge impedance for PK 50-4-11K, Ω	50±3
Attenuation coefficient at a frequency of max. 3000 MHz, dB/m	1.15
Coupling resistance, MΩ/m, max.	10
Electric capacity, pF/m	100

OPERATION GUIDELINES:

Minimum bending radius
 – when installing at t=5°C and above — 50 mm;
 – when installing at t<5°C — 100 mm.

Cable service life is 15 years.

	1000 MHz	0.24
Design electric capacity, pF/m		179.5

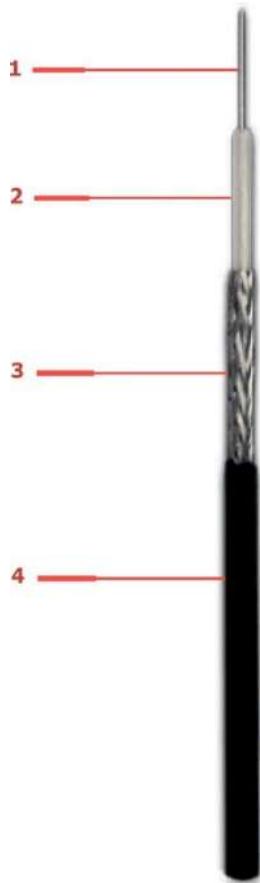

OPERATION GUIDELINES:

The minimum bending radius during installation is min. 30 mm.
 Laying and installation of the cable must be carried out at t of min. 0°C.

Cable service life:

PK 50-5-352, PK 50-5-354 — 8 years
 PK 50-5-351, PK 50-5-353 — 15 years.

RADIO FREQUENCY CABLES OF STANDARD HEAT RESISTANCE 75 Ω PK 75-1-13C

PK 75-1-13 C	
Regulatory documentation	TU 5.502.025-92
National product classification code	37 8811
Application	Special-purpose equipment
Cable operating temperature, °C	-60 to +85

DESIGN PARAMETERS:

1	Inner conductor	Silver-plated wire of БрХЛрК alloy, nominal diameter 0.18 mm
2	Insulation	Solid insulation, low density polyethylene, insulated diameter 1.0 ± 0.1 mm
3	Outer conductor	Braid of silver-plated copper wires with a nominal diameter of 0.08 mm; braid density 75–85%
4	Sheath	Light stabilized low density polyethylene, cable outer diameter 1.9 ± 0.20 mm
	Estimated cable weight, kg/km	4.8

ELECTRICAL PARAMETERS:

Self-surge impedance, Ω	75 ± 5.0
Attenuation coefficient at a frequency of max. 100 MHz, dB/m	0.65
Electrical resistance of the inner conductor, Ω/m, max.	1.5
Coupling resistance at a frequency of 0.03 GHz, MΩ/m, max.	5.0

DESIGN:

- 1** Inner conductor
- 2** Insulation
- 3** Outer conductor
- 4** Sheath

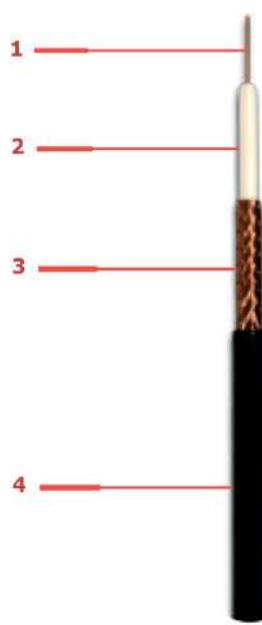

OPERATION GUIDELINES:

Minimum bending radius
 – when installing at $t=5^\circ\text{C}$ and above — 10 mm;
 – when installing at $t<5^\circ\text{C}$ — 20 mm.

Cable service life is 15 years.

National product classification code		35 8812		35 8800
Application	These cables are intended for transmission of television signals in terrestrial, cable and satellite television systems, video surveillance systems			
Cable operating temperature, °C	-40 to +70	-40 to +80	-40 to +70	-60 to +85

DESIGN PARAMETERS:

	PK 75-3-16AY	PK 75-3-16АУЛ	PK 75-3-351 (RG 59B/U)	PK 75-3-352 (RG 59B/U)
Inner conductor	Seven copper wires with nominal diameter of 0.16 mm, conductor nominal diameter 0.48 ± 0.01 mm		Copper wire, nominal diameter 0.64 mm	
Insulation	Solid, low density polyethylene, insulated diameter 2.9 ± 0.1 mm		Porous (S-F-S), low density polyethylene, insulated diameter 2.95 ± 0.10 mm	
Outer conductor	Braid of copper wires with nom. diam. 0.12 mm; density of braid 88–92%	Braid of tinned copper wires with nom. diam. 0.12 mm; braid density min. 88%	Foiled shield + braid of copper wires with nom. diam. 0.10 mm; braid density min. 24%	Foiled shield + braid of tinned copper wires with nom. diam. 0.10 mm; braid density min. 24%
Sheath	PVC plastic compound, cable outer diameter 4.4 ± 0.25 mm	Light stabilized low density polyethylene; cable outer diameter $4.2^{+0.3}_{-0.1}$ mm	PVC plastic compound, cable outer diameter 4.70 ± 0.15 mm	Light stabilized low density polyethylene, cable outer diameter 4.70 ± 0.20 mm
Estimated cable weight, kg/km	28.0	28.0	21	17

ELECTRICAL PARAMETERS:

	PK 75-3-16AY	PK 75-3-16АУЛ	PK 75-3-351 (RG 59B/U)	PK 75-3-352 (RG 59B/U)
Self-surge impedance, Ω		75 ± 3		75 ± 3
Attenuation coefficient at a frequency of max., dB/m				
100 MHz	—	—	0.10	
200 MHz	0.30	—	0.14	
500 MHz	—	—	0.23	
800 MHz	—	—	0.30	
1000 MHz	—	—	0.36	

Cable service life is 12 years.

DESIGN:

- 1 Inner conductor
- 2 Insulation
- 3 Outer conductor
- 4 Sheath

RADIO FREQUENCY CABLES OF STANDARD HEAT RESISTANCE 75Ω

PK 75-3,4-31 (RG-59/U)

Regulatory documentation	TU 16.K05-013-2002
National product classification code	35 8811
Application	These cables are intended for transmission of television signals in terrestrial, cable and satellite television systems, video surveillance systems. Design is similar to cables of RG 59/U type
Cable operating temperature, °C	-40 to +70

DESIGN PARAMETERS:

1 Inner conductor	Copper wire, nominal diameter 0.64 mm
2 Insulation	Porous (S-F-S), low density polyethylene, insulated diameter 3.4 ± 0.12 mm
3 Outer conductor	Foiled shield + braid of copper wires with a nominal diameter of 0.10 mm; braid density min. 32%
4 Sheath	Polyvinylchloride compound, cable outer diameter 5.80 ± 0.25 mm
Estimated cable weight, kg/km	34.4

PK 75-3,4-31 (RG-59/U)

DESIGN:

- 1 Inner conductor
- 2 Insulation
- 3 Outer conductor
- 4 Sheath

ELECTRICAL PARAMETERS:

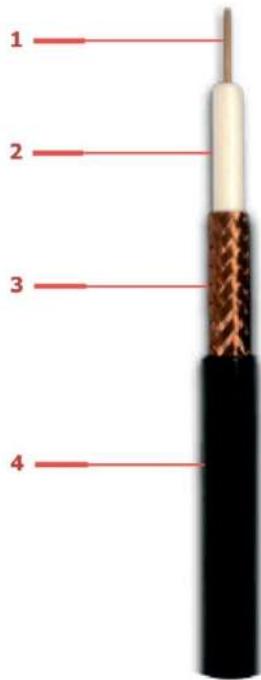

Self-surge impedance, Ω	75 \pm 3
	100 MHz
	200 MHz
Attenuation coefficient at a frequency of max., dB/m	0.17
	500 MHz
	800 MHz
	1000 MHz
	0.20
	0.23
	0.35
	0.38

OPERATION GUIDELINES:

The minimum bending radius during installation is min. 35 mm.
Laying and installation of the cable must be carried out at t of min. 0°C.

Cable service life is 5 years.

RADIO FREQUENCY CABLES OF STANDARD HEAT RESISTANCE 75 Ω

**PK 75-3,7-151****DESIGN:**

- 1** Inner conductor
- 2** Insulation
- 3** Outer conductor

RADIO FREQUENCY CABLES OF STANDARD HEAT RESISTANCE 75 Ω

PK 75-4,3-31, analogue — RG-6/U

Regulatory documentation	TU 16.K05-013-2002
National product classification code	35 8811
Application	They are used as subscriber cables for cable TV networks, video surveillance and satellite receiver systems with F, BNC, TNC, FME type connectors. Design is similar to cables of RG 6 type.
Cable operating temperature, °C	-40 to +70

DESIGN PARAMETERS:

PK 75-4,3-31

1 Inner conductor	Copper wire, nominal diameter 0.90 mm
2 Insulation	Porous (S-F-S), low density polyethylene, insulated diameter 4.3 ± 0.12 mm
3 Outer conductor	Foiled shield + braid of copper wires with nom. diam. 0.10 mm; braid density min. 24.1%
4 Sheath	Polyvinylchloride compound, cable outer diameter 6.6 ± 0.25 mm
Estimated cable weight, kg/km	41.0

- 4 Sheath

ELECTRICAL PARAMETERS:

	PK 75-5-359 (RG-6)	PK 75-5-360 (RG-6)
Self-surge impedance, Ω	75 ± 3	
Cable electric capacity, pF/m	55	
Wavelength shorting coefficient	1.25	
Coupling resistance, max., MΩ/m	15	
Attenuation coefficient at frequency of max., dB/m	100 MHz 200 MHz 500 MHz 800 MHz 1000 MHz	0.09 0.10 0.15 0.19 0.23

OPERATION GUIDELINES:

Laying and installation of the cable must be carried out at t of min. 0°C.
The minimum bending radius during installation is min. 30 mm.

Cable service life:
PK 75-5-359 — 8 years
PK 75-5-360 — 5 years

RADIO FREQUENCY CABLES OF STANDARD HEAT RESISTANCE 75Ω

	PK 75-7-351 (RG 11U, CATV-11)	PK 75-7-352 (RG 11U, CATV-11)
Regulatory documentation		TU 16.K05-024-2004
National product classification code		35 8800
Application	Used as a distribution and sub-main cable for cable television networks with F, BNC, TNC connectors	
Cable operating temperature, °C	-40 to +70	-60 to +85

DESIGN PARAMETERS:

	PK 75-7-351 (RG 11U, CATV-11)	PK 75-7-352 (RG 11U, CATV-H)
1 Inner conductor	Copper wire, nominal diameter 1.60 mm	
2 Insulation	Porous, low density polyethylene, insulated diameter 7.20 ± 0.15 mm	
3 Outer conductor	Foiled shield + braid of tinned copper wires with a nominal diameter of 0.15 mm; braid density min. 65%	
4 Sheath	PVC plastic compound, cable outer diameter 10.10 ± 0.30 mm	Light stabilized low density polyethylene, cable outer diameter 10.10 ± 0.30 mm
Estimated cable weight, kg/km	106	90

ELECTRICAL PARAMETERS:

	PK 75-7-351	PK 75-7-352
Self-surge impedance, Ω	75 ± 3	
Attenuation coefficient at frequency of max., dB/m	100 MHz 200 MHz 500 MHz 800 MHz 1000 MHz	0.04 0.06 0.10 0.14 0.16

Certificate of the Ministry of Digital Development, Communications and Mass Media of the Russian Federation
Д-КБ-1087

DESIGN:

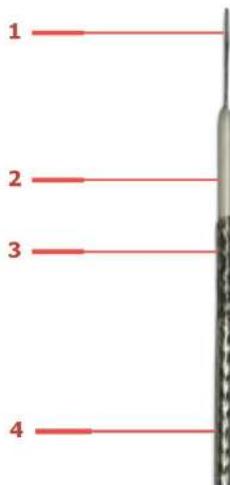

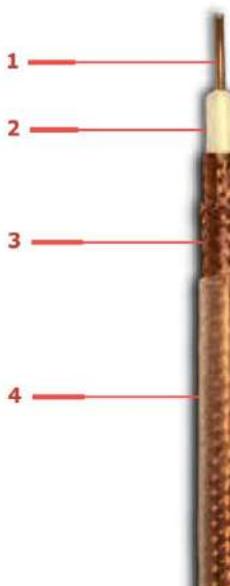

- 1 Inner conductor
- 2 Insulation
- 3 Outer conductor
- 4 Sheath

OPERATION GUIDELINES:

Laying and installation of the cable must be carried out at t of min. 0°C .
The minimum bending radius during installation is min. 60 mm.

Cable service life:
PK 75-7-351 — 8 years;
PK 75-7-352 — 15 years

BICOAXIAL RADIO-FREQUENCY CABLE, FLAME RETARDENT, WITH INSULATION AND SHEATH OF HALOGEN-FREE POLYMER COMPOUNDS

2PK 50-3-11 нг(А)-HF	
1	Regulatory documentation
2	TU 3588-409-00217053-2009
3	National product classification code
35 8819	
4	Application
5	Designed for transmission of low power electrical signals, connection of various devices in control circuits, inter-instrument connections for general industrial use and at nuclear power plants (NPPs), including inside the containment area of NPPs
6	Cable operating temperature, °C
-60 to +70	

DESIGN PARAMETERS:

2PK 50-3-11 нг(А)-HF	
1	Inner conductor Central wire - corrosion-resistant steel, nom. diam. 0.30 mm, outer lay – copper wires, nominal diameter 0.30 mm.
2	Insulation Solid, made of cross-linked polyethylene, insulation diameter 2.95 ± 0.10 mm
3	Outer conductor Braid of copper wires with a nominal diameter of 0.10 mm, braid density min. 90%
4	Sheath Halogen-free polymer compound, thickness 0.65 ± 0.2 mm
5	Number of coaxial pairs Two pairs twisted into a core
5	Wrapping PET-E polyethylene terephthalate film with a nominal thickness of 0.25 mm with an overlap of at least 30%
6	Filling Halogen-free polymer compound, min. thickness 0.30 mm
7	Collective shield Braid of copper-steel wires with a nominal diameter of 0.20 mm; braid density min. 90%
8	Outer sheath Halogen-free polymer compound, nominal thickness 1.4 mm

DESIGN:

- 1 Inner conductor
- 2 Insulation
- 3 Outer conductor
- 4 Sheath
- 5 Wrapping
- 6 Filling
- 7 Collective shield
- 8 Outer sheath

ELECTRICAL PARAMETERS:

Self-surge impedance of each coaxial pair must be $50 \pm 2 \Omega$.

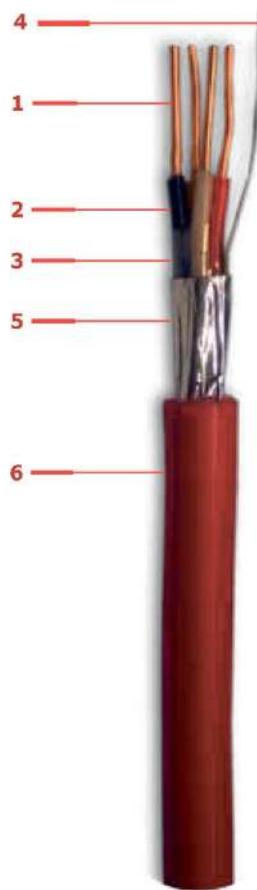

Electrical insulation resistance, calculated for a temperature of 20°C and length of 1 m, must be at least $1 \text{ T}\Omega$.

Coaxial pairs in the finished cable must withstand the test with alternating voltage of 3.0 kV with a nominal frequency of 50 Hz for 5 minutes.

The voltage of the internal discharge start in the insulation at frequency of 50 Hz must be at least 1.5 kV.

The cable service life, provided that the consumer observes the conditions of transportation, storage, laying (installation) and operation specified in these technical specifications, must be at least 40 years. Service life is calculated from the date of manufacture of the cable.

FIRE ALARM CABLES КСПВЭВ

КСПВЭВ	
Regulatory documentation	TU 16.K05-027-2005
National product classification code	35 8200
Application	The cables are intended for transmission of signals and data indoors, as well as outdoors with fixed laying along the outer walls of buildings and structures, including in fire hazardous areas, designed for operation in a temperate climate at ambient temperature
Cable operating temperature, °C	-40 to +70

DESIGN PARAMETERS:

Number of pairs and conductor cross section, mm ²	Nominal cross section of conductor, mm ²	Maximum outer diameter, mm	Estimated cable weight, kg/km
1×2×0.50	0.50	5.85	40.6
2x2x0.50	0.50	6.50	53.8
3x2x0.50	0.50	8.00	71.6
4x2x0.50	0.50	8.90	89.4

ELECTRICAL PARAMETERS:

Operating voltage, max., V	300
Test voltage with frequency of 50 Hz for 5 minutes after soaking in water, V	1000
Electrical insulation resistance, calculated per 1 km of length, max., MΩ	100
Service capacitance of КСПВЭВ cables at frequency of 800 Hz, nF/km, max. Capacitance exceedance up to 120 nF/km is allowed for cables with conductor number of 2, 4, 6	100
Electrical resistance of 1 km of conductor at 20°C, max, Ω	36.0

INSTALLATION CONDITIONS:

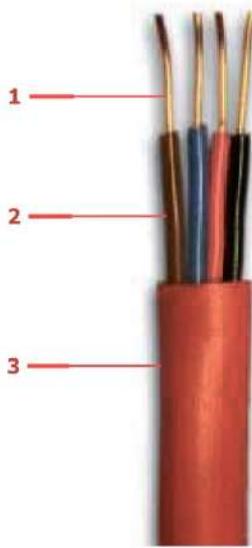

1. Cable must be laid at ambient temperature of -5°C to +50°C.
2. Cable service life is 15 years.

DESIGN:

- 1 **Conductor** (Class 1) of copper wire,
- 2 **Conductor insulation** of PVC plastic compound; insulated conductors are twisted into a core (for a cable КСПВЭВ 2x2x0.50, four insulated conductors are twisted together);
- 3 **Bonding wrap** of polyethylene terephthalate film
- 4 **Drain conductor;**
- 5 **Shield** of aluminum-lavsan tape;
- 6 **PVC plastic compound sheath**, applied by compression

FIRE ALARM CABLES

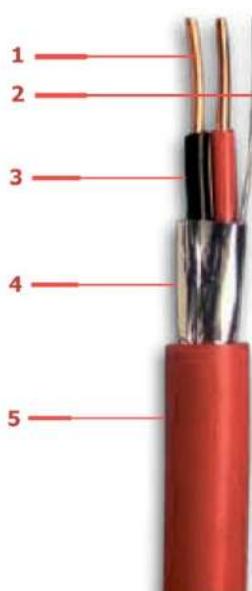

KMBB, KMBЭВ

KMBB

DESIGN:

- 1 Conductor** (Class 1) of copper wire
- 2 Conductor insulation** of PVC plastic compound. Insulated conductors are twisted in pairs, pairs are laid in parallel
- 3 Sheath** of PVC plastic compound

KMBЭВ

DESIGN:

- 1 Conductor** (Class 1) of copper wire
- 2 Drain conductor**
- 3 Conductor insulation** of PVC plastic compound. Insulated conductors are twisted in pairs, pairs are laid in parallel
- 4 Shield** of aluminum-lavsan tape
- 5 Sheath** of PVC plastic compound

KMKB, KMBЭВ

ELECTRICAL PARAMETERS:

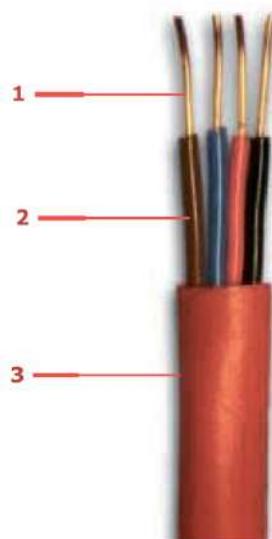

Operating voltage, max., V	300
Test voltage with frequency of 50 Hz for 5 minutes after soaking in water, V	1000
Electrical insulation resistance, calculated per 1 km of length, max., MΩ	100
Service capacitance of cables at frequency of 800 Hz, nF/km, max. Capacitance exceedance up to 120 nF/km is allowed for cables with conductor number of 2, 4, 6	100

INSTALLATION CONDITIONS:

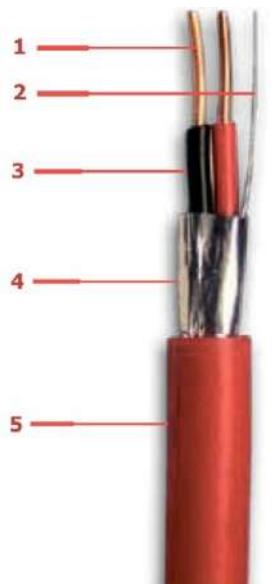

Cable must be laid at an ambient temperature of -5°C to +50°C.

Cable service life is 15 years.

FIRE ALARM CABLES KMVBНГ-LS, KMВЭВНГ-LS

KMVBНГ-LS
DESIGN:

- 1 Conductor** (Class 1) of copper wire
- 2 Core insulation** of low fire risk PVC plastic compound with low gas and smoke emission. Insulated conductors are twisted in pairs, pairs are laid in parallel
- 3 Sheath** of low fire risk PVC plastic compound with low gas and smoke emission

KMВЭВНГ-LS
DESIGN:

- 1 Conductor** (Class 1) of copper wire
- 2 Drain conductor**
- 3 Core insulation** of low fire risk PVC plastic compound with low gas and smoke emission. Insulated conductors are twisted in pairs, pairs are laid in parallel
- 4 Shield** of aluminum-lavsan tape
- 5 Sheath** of low fire risk PVC plastic compound with low gas and smoke emission

KMVBНГ-LS, KMВЭВНГ-LS	
Regulatory documentation	TU 16.K05-033-2007
National product classification code	35 6500
Application	The cables are intended for transmission of signals and data indoors, as well as outdoors with fixed laying along the outer walls of buildings and structures, including in fire hazardous areas, designed for operation in a temperate climate at ambient temperature
Cable operating temperature, °C	-40 to +70

DESIGN PARAMETERS:

Number of pairs and conductor cross section, mm ²	Nominal cross section of conductor, mm ²	Estimated outer dimension, mm		Estimated cable weight, kg/km		Electrical resistance of 1 km of conductor at 20°C, max., Ω

Automotive wires with PVC insulation ПВА, ПГВА

Regulatory documentation TU 16.K17-021-94

National product classification code 35 5212

Application

designed to connect automotive electrical equipment and devices with rated voltage of up to 48 V.

Design:

- | | |
|---|---|
| 1. Conductor
2. Insulation | copper, round, multiwire
of PVC plastic compound |
|---|---|

Wire insulation has a solid or combined color, which is specified in the order. Combined coloring is performed by a combination of parallel stripes of two colors, one of which is the main one. The total width of the secondary color stripes is less than the total width of the primary color stripes. The designation of the combined coloring includes the designation of the main and auxiliary colors, and the designation of the main color should be the first. In the absence of an indication of specific colors in the order, it is possible to supply a wire of any color.

Specifications:

Temperature range of use:

for wires ПВА:	-40°C to +105°C
for wires ПГВА:	-40°C (for ХЛ -60°C) to +70°C

Wires are resistant to diesel fuel, oil and gasoline.

Wires are resistant to cracking.

Wires are resistant to mold fungi.

The wires are flame-retarding when laid alone.

Wires ПГВА in ХЛ version are resistant to multiple shocks with an acceleration of 1470 m/s² with a shock duration of 1–5 ms at a temperature of -60°C.

Wires ПВА are resistant to puncturing at a temperature of +110°C for 8 hours.

Wires ПГВА in the ХЛ version are resistant to the effects of installation and operational bends with bending radius of at least ten maximum outer diameters of the wire at temperatures not lower than -60°C; wires ПГВА in the Т and У version, ПВА in the У version — at temperature not lower than -30°C.

Flexibility coefficient of ПГВА wires in ХЛ version

when the ambient temperature changes from -60°C to +(25±10)°C: max. 10

Minimum operating time of wires in the modes and conditions allowed by the technical specifications, min.:

for wires ПВА	at +105°C	5000 h
	+90°C	10 000 h
	+70°C	20 000 h
for wires ПГВА	at +70°C	20 000 h

The service life of the wires, within which the operating time is provided, is: 10 years

Test voltage with frequency of 50 Hz after soaking in water:

1000 V

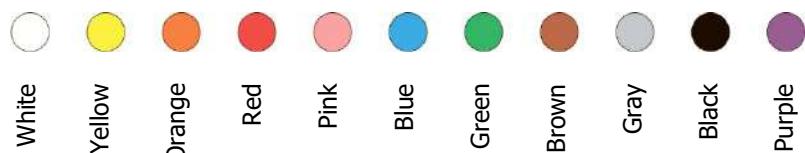

Wires ПВА, ПГВА are manufactured according to the technical specifications (TS), agreed with the technical development center of AvtoVAZ OJSC.

Automotive wires with PVC insulation ПВА, ПГВА

Wire colors

Wires can be solid or combined colors. Combined coloring is performed by a combination of parallel stripes of two colors, one of which is taken as the main one.

Supply options

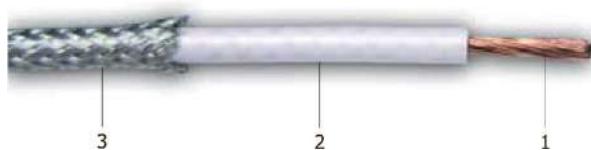

Automotive wire ПГВАЭ

wire of increased flexibility with a copper core, single-core with PVC insulation, shielded

Regulatory documentation TU 16.K17-021-94**National product classification code** 35 5212**Application**

designed to connect automotive electrical equipment and devices with rated voltage of up to 48 V.

**Design:**

1. **Conductor**
2. **Insulation**
3. **Shield**

copper, round, multiwire
of PVC plastic compound
as braid of tinned copper wires

Specifications:

Temperature range of use:

-40°C to +70°C

Wires are resistant to diesel fuel, oil and gasoline.

Wires are resistant to mold fungi.

The wires are flame-retarding when laid alone.

Minimum operating time of wires in the modes and conditions allowed by the technical specifications, at +70°C, min.:

20 000 h

Test voltage with frequency of 50 Hz after soaking in water:

1000 V

The service life of the wires, within which the operating time is provided, is:

10 years

Design and characteristics:

Nominal cross section of conductor, mm ²	Conductor flexibility class	Nominal insulation thickness, mm	Maximum outer diameter, mm	Estimated weight of 1 km of wire, kg	Direct current electrical resistance of 1 km of conductor at 20°C, Ω, max.

Supply options

Automotive wires with thin-wall PVC insulation ПВАМ, ПВАМТ, ПВАМЭ, ПВАМЭВ, ПВАМВ

According to their characteristics, ПВАМ wires comply with the requirements of DIN 72551, ISO 6722, BOSCH 5 998 340.

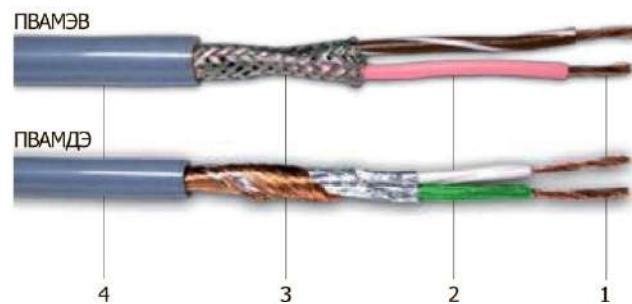

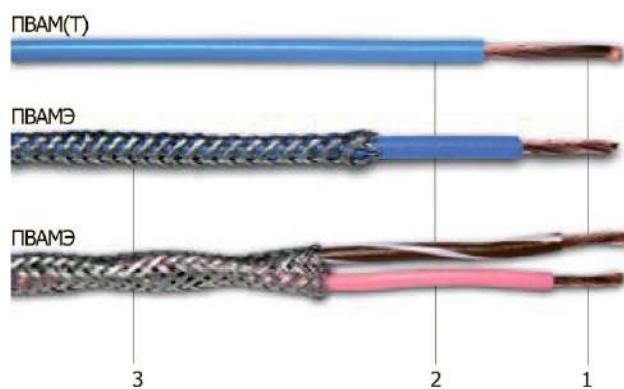

Wire grade	Regulatory documentation	National product classification code
ПВАМ, ПВАМЭ, ПВАМЭВ	TU 16.K05-015-2002	35 5200
ПВАМВ 2x0.75, 3x0.75	ToR No. 01/08	
ПВАМЭ 2x0.50	ToR No. 22/07	
ПВАМЭ 2x0.75 and ПВАМЭ 3x0.75	ToR No. 51/07	
ПВАМТ	TT	
ПВАМДЭ	TU 16.K17-021-94	35 5200

Application:

The wires are designed for flexible connection of automotive electrical equipment and devices with rated voltage of up to 48 V, manufactured for vehicles designed for operation in temperate and tropical climates at ambient temperatures from -40°C to +45°C and relative air humidity up to 90% at temperatures up to +27°C.

Description

- ПВАМ wire with a copper core of increased flexibility, with thin-walled PVC insulation, single-core
- ПВАМЭ wire with a copper core of increased flexibility, with thin-walled PVC insulation, single-core, thermal resistant, shielded
- ПВАМЭВ wire with a copper core of increased flexibility, with thin-walled PVC insulation, single- and two-core shielded, in a PVC sheath, thermal resistant
- ПВАМТ wire with a copper core of increased flexibility, with thin-walled PVC insulation, single-core, thermal resistant, shielded, thermal resistant
- ПВАМВ wire with a copper core of increased flexibility, with thin-walled PVC insulation, two- and triple-core shielded, in a PVC sheath, thermal resistant
- ПВАМДЭ high-flexibility wire with copper conductors, with PVC insulation, two-core, shielded, in a PVC sheath, thermal resistant

Design:

1. Conductor copper, round, multiwire
2. Insulation of PVC plastic compound
3. Shield of tinned copper wires, for wires ПВАМЭ, ПВАМЭВ, ПВАМДЭ
4. Sheath of polyvinylchloride plastic compound, for wires ПВАМЭВ, ПВАМВ, ПВАМДЭ

Specifications:

Temperature range of use:

for wires ПВАМ, ПВАМЭ, ПВАМЭВ, ПВАМВ, ПВАМДЭ: -40°C to +105°C
 for wires ПВАМТ: -40°C to +125°C

Wires are resistant to mold fungi.

The service life of the wires, within which the operating time is provided, is:

The actual service life is not limited to the specified one, but is determined by the technical condition of the wire.

Test voltage with frequency of 50 Hz after soaking in water:

8 years

1000 V

Wires ПВАМ, ПВАМТ are manufactured according to the technical specifications (TS), agreed with the technical development center of AvtoVAZ OJSC.

Automotive wires KBBA, KBYA

for vehicles' ABS (anti block) systems

Regulatory documentation TU 16.K05-028-2005

National product classification code 35 5200

Application

Cables are designed for flexible connection of automotive electrical equipment and devices manufactured for vehicles designed for operation in temperate and tropical climates.

Design:

1. **Inner conductor** insulated blank, wire ГИБАМ ТУ 16.К05-015-2002.
2. **Insulation** for wires KBBA— ПВХ:
for wires KBYA— полиуретан

Specifications:

Cable resistant to puncturing.

The cable is resistant to vibration loads with frequency of 50 to 250 Hz with acceleration of 10g.

The cable is resistant to shock loads of 10 000 shocks with acceleration of 15g.

Temperature range of use:

for cables KBYA: **-45°C to +130°C**
for cables KBBA: **-45°C to +70°C**

The cable is resistant to aggressive media: gasoline, diesel fuel, motor oil, coolant, brake fluid and their vapors.

Service life of cables, including installation and operation time:

Test voltage applied between conductors with frequency of 50 Hz in water for 5 minutes:

**8 years
1.5 kV**

Design parameters:

Cable grade	Number and nominal cross section of conductor, mm ²	Thickness, mm		Maximum outer diameter, mm	Estimated weight of 1 km of cable, kg	Electrical resistance of 1 km of conductor at +20°C max., Ω
		Insulation (nominal)	Sheath (minimum)

ПЩ wire is made of wire MM

FLEXIBLE COLD-RESISTANT WIRE ПГХ

Wire grade	ПГХ
Regulatory documentation	TU 16.K05-004-94
National product classification code	35 5415
Application	Designed for use as winding leads for electric motors of compressors in domestic refrigerators with operating voltage up to 600 VAC, frequency 50–60 Hz and continuous permissible operating temperature of the wire of 120°C. Resistant to coolants R12, R22, RB4, R134A
Temperature index	−60...+120°C

DESIGN:

1 Conductor — copper, 6 flexibility class

2 Insulation — combined of polyester threads and polyethylene terephthalate film

Electrical resistance of 1 km of wire, Ω, max.	26.0
Test voltage with frequency of 50 Hz for 1 minute, V	3000
Flexibility test by deformation method, min.	102 mm
Resistance to extraction in trichlorethylene, max. %	1
Outer diameter, mm	2.03±0.20
Estimated weight, kg/km	8.36

HIGH-VOLTAGE LEAD-OUT THERMAL RESISTANT WIRES ПМПИФ AND ПМПСФ

Wire grade	ПМПИФ ПМПИФ
Regulatory documentation	TU 16.K05-008-2001
National product classification code	35 5400
Application	Designed for operation in oil-filled electric motors and other electrical devices operating at voltages up to 2.5 kV AC, frequency 50 Hz
Temperature index	-40...+120°C

DESIGN:

- 1 **Conductor** — flexible of copper wires
- 2 **Insulation** — combined: the first layer is a sintered polyimide-fluoroplastic film (ПМПИФ) or a sintered film of PTFE 4D (ПМПСФ), the second layer is a fluoro-elastomer

Wire grade	Nominal cross section of conductor, mm ²	Insulation thickness, mm		Nominal outside dimensions, mm		Estimated weight of wire, kg/km
		Min	Max	Min	Max
